Islamabad, Pakistan

SUMMARY

I am a passionate Game Developer with a strong foundation in Unity, C#, and immersive gameplay design. My experience spans across building interactive 3D environments, prototyping mechanics, and optimizing performance for both PC and VR platforms. Alongside game development, I have a background in AI-based systems and full stack development, allowing me to blend creativity with technical precision. I'm driven by a desire to create engaging player experiences through innovation, storytelling, and polished gameplay execution.

[Portfolio](#)

SKILLS

C++, C#, Unity 3D, OpenGL HTML5, CSS3, GitHub, Game Physics, Gameplay Mechanics, UI Scripting, Level Design, Asset Integration, Performance Optimization, AI Systems Integration, Procedural Game Design, Problem Solving, Team Collaboration.

WORK EXPERIENCE

Plasma IT Solutions

Apr 2026 - July 2026

Unity Game Developer

Rawalpindi, Pakistan

- Developed flight simulation systems, including aircraft controls and physics-based movement.
- Built gameplay features such as missions, checkpoints, and navigation mechanics.
- Optimized large environments for smooth performance during high-speed gameplay.
- Debugged and refined gameplay to improve responsiveness and overall experience.

Veeivs

Oct 2025 - December 2025

Game Developer Intern

Islamabad, Pakistan

- Built core gameplay systems in Unity.
- Implemented modular weapon systems with rotation, cooldowns, and firing effects.
- Created and optimized 3D environments and chunk-based level layouts.
- Debugged gameplay issues using logs, profiling, and structured testing.

PROJECTS

Mars Vanguard

Unity 3D, C#, 3D Development

- Contributed to a 3D space shooter by developing modular weapon mechanics with cooldowns and firing effects, building chunk-based levels, and optimizing gameplay performance through debugging and profiling.

Tick-Tack Multiplayer Online (Task Based)

Unity 3D, C#, Multiplayer Networking

- Developed a real-time multiplayer Tic-Tac-Toe game with lobby and matchmaking systems, implementing turn-based server-client gameplay and accurate win/draw detection.

GOAP AI System Integration

Unity 3D, C#, Artificial Intelligence

- Integrated a Goal-Oriented Action Planning (GOAP) framework to enable adaptive, context-aware NPC decision-making in response to dynamic game states and player actions.

Fabulous Shooter (First-Person Shooter)

Unity 3D, C#, 3D Development

- Developed a full FPS experience featuring enemy AI, diverse weapons, immersive audio, and core systems including shooting mechanics, health/damage, and progressive difficulty scaling.

Furious Racer (Vehicle Racing Game)

Unity 3D, C#, Physics Simulation

- Developed an arcade racing game with realistic quad bike physics, dynamic terrain, time-based challenges, and systems for vehicle control, checkpoints, and real-time UI timers.

Super Runner 2D (Mario-Style Platformer)

Unity 3D, C#, 2D Animation

- Designed a polished 2D platformer with fluid animations, collectibles, dynamic audio, responsive character controls, enemy AI, and obstacle-rich level design.

Endless Runner 3D

Unity 3D, C#, Procedural Generation

- Built infinite runner with procedural level generation, progressive difficulty scaling, and power-up mechanics.

2D Grid Battle Arena

Unity 3D, C#, Turn-Based Strategy

- Created a turn-based top-down arena where players and AI take turns on a grid. Implemented win/draw logic, custom enemy AI.

Shape Shifter Runner

Unity 3D, C#

- Developed a reflex-based runner game featuring seamless transitions between sphere, cube, and jet forms, with smooth camera tracking and procedural obstacle generation.

VR Game Environment

Unity 3D, XR Toolkit, Virtual Reality

- Designed an immersive VR experience using Unity's XR toolkit, with interactable objects, smooth motion, and headset-agnostic testing via MockHMD.

3rd Person Platform Adventure

Unity 3D, C#

- Built a 3D platformer with multi-level progression, collectible mechanics, dynamic character animations, third-person camera system, jumping physics, and level transition management.

AI-Based Deepfake Detection with Sentimental Analysis in Videos (FYP)

Python, PyTorch, OpenCV, AI&ML

- Built a deep learning model to detect manipulated video content. Incorporated sentiment analysis from AI generated Videos.

EDUCATION

Bachelor of Science in Computer Science (BSCS)

PMAS Arid Agriculture University, Rawalpindi, Pakistan
